PROFILE

First Class Honours Computer Science graduate with practical experience in frontend and full-stack development. Skilled in building responsive web applications using React.js, JavaScript, and Python, with a strong focus on performance and usability. Experienced in API integration, UI/UX design, and solving real-world technical problems. Passionate about AI-driven solutions and contributing to innovative software engineering teams.

EDUCATION & QUALIFICATIONS

BSc (Hons) Computer Science 2021 – 2024
Middlesex University, London First Class Honours

Key Modules: Enterprise Networking and Automation (90%), Web Applications and Databases (86%), Undergraduate Individual Project (81%), Testing and Verification (74%).

A Levels – Biology, Physics, Chemistry 2017 – 2020
Royal College, Colombo

SKILLS

Frontend Technologies: JavaScript (ES6+), React.js, HTML5, CSS3, Responsive Design, Tailwind CSS

Backend & Databases: Node.js, Python, Java, PHP, REST API Development, MySQL

Tools & Technologies: Git, GitHub, Figma, Adobe Creative Suite, Cisco Packet Tracer

Software Concepts: Agile/Scrum, UI/UX Design, Software Testing (JUnit, Mockito), AI Prompt Engineering

PROJECTS AND EXPERIENCES

Front-End Developer – Tennessee Chicken Shop, London Jan 2025 – Apr 2025

- Redesigned website interface to improve performance and user experience using React components.
- Translated Figma designs into responsive UI elements and resolved performance bottlenecks.

Enterprise Networking and Automation (Python, Cisco Packet Tracer) – 90%
Created Python scripts to automate network configurations, reducing manual setup time and improving simulation efficiency. Applied advanced networking concepts to streamline infrastructure deployment.

AI-Assisted Recipe Generation Platform (React, APIs) – 81%
Developed a React.js application for my Undergraduate Thesis that generates personalized recipes based on user-input ingredients. Integrated external APIs to deliver real-time, dynamic AI-driven results.

Web Applications and Databases (React, Node.js, MySQL) – 86%
Developed a secure task management system with CRUD functionality and REST API integration. Built backend APIs and connected them with a responsive React frontend dashboard for tracking user activity.

Cable Management & Network Technician – Middlesex University Aug 2023 – Jun 2025

- Assisted in installation and maintenance of network infrastructure to ensure reliable connectivity across departments.

Testing and Verification Project (JUnit, Mockito) – 74%
Applied comprehensive software testing methodologies, including unit testing and mocking frameworks, to ensure code reliability and quality in complex software systems.

Weather Dashboard Application (JavaScript, API Integration)
Built a real-time weather app using public APIs, implementing asynchronous data fetching, dynamic UI updates, and robust error handling for improved reliability.

User Experience (UX) Design Prototype (Figma)
Created high-fidelity prototypes focused on usability and accessibility. Conducted iterative testing and design refinement based on user feedback to optimize the digital experience.

CERTIFICATIONS

Microsoft Azure Fundamentals (AZ-900) | Figma Essential Training (UI/UX Design)
